Corporate Overview

ProLink specializes in Enterprise Architecture providing design, development and deployment of solutions for organizations with complex business processes that require a significant amount of data from different internal databases, spreadsheets and documents. **ProLink's** framework interfaces with other internal / external systems allowing the end user to securely share information across multiple personnel, departments and office locations providing a central collaborative work environment.

ProLink was first offered within the financial services industry, as a tool to automate a wide range of business process areas like processing, underwriting and managing complex transactions.

Our strategic approach is based on the fundamental principle of leveraging the client's existing models, spreadsheets, documents and data, including the intellectual capital they contain, in an automated, integrated and web-enabled process management solution. End users want to continue to use the tools that they know and trust. This approach accelerates the learning curve and enhances user adoption, which are critical to the project's success.

ProLink Solutions Enterprise Value:

- **Compliance Tracking**
- **Asset Management**
- **Portfolio Management**
- **Audit Support**
- **Safety Training / Compliance Application**
- **Accounting / Finance Management**
- **Enterprise Performance Management**
- **Real-time Reporting**
- **Web-based Application**

ProLink EHS – Environmental Health and Safety Software

ProLink EHS is a web-based Environmental Health and Safety (EH&S) system that provides the ability to manage EH&S compliance activities electronically, while leveraging data collected in each step of the process.

ProLink EHS connects disparate systems and data from all EH&S activities, including policy, planning, implementation, checking and corrective action, and management review and reporting. The system can be rapidly configured and customized to each client's unique specifications, business rules, documents and data so that the system conforms to existing operations and ways of doing business.

ProLink is modular and can be implemented for a single process, like environmental audits or training programs, or used as the framework for developing and implementing an overall Environmental or Safety Management System.

Important features include:

- Includes environmental compliance and auditing.
- Tracks multiple facilities and current characteristics including location, contacts, and past audits and corrective actions.
- Environmental facility audits are tracked and performed with a workflow approach including required documents and checklists based on stage and status of audit.
- Notice of violations, findings and corrective actions are tracked and monitored
- Facility compliance calendar for facilities tracking various reports based on user-defined calendar (annually, bi-annually, monthly, one-time, quarterly, semi-annual). Based on defined frequency alerts and reminders are sent out to notify of upcoming or past due items.
- Facility emissions are tracked with user-defined types, annual quantity, and description.
- Facility permits are tracked with ID, description, and expiration dates
- Multiple sites per facility can be tracked to keep track of larger facilities.
- Unlimited facility tanks, both UST and AST, are tracked covering data such as size, contents, registration, etc.

- Incident tracking of facilities to keep track of the number of facility incident and overall ranking.
- Canned reporting including Traffic Light Report showing current facility status and open items, Quarterly Change Report showing changes in facilities status (or lack thereof), Notice of Violation Report showing current facilities violations, and other canned reports including incident tracking and other rollup information.

ProLink SmartDox Office Integration: **SmartDox** technology provides full integration with Microsoft Excel® and Word® documents. **SmartDox** captures multiple sources of data from different entities and can “retrieve” and “receive” data from the point database providing “real time” information, insuring user adoption, which is paramount for our clients. **SmartDox** eliminates human error caused by dual entry or transferring data from multiple formats. **SmartDox** captures this data allowing the company to benefit from their invested intellectual capital.

Partial List of Key Clients:

- US Bank
- Tompkins Industries
- Coldwell Banker CBRE / Melody Capital Markets
- Collateral Mortgage Capital
- Coors Brewing Company

State Government Contract Listing:

- Colorado Department of Public Health and Environment
- State of Oklahoma
- Virginia Housing Dev. Authority (VHDA)
- Michigan State Housing Dev. Authority (MSHDA)

Type of company: SBA - Founded in 1998 (Privately held)

Security Clearance: SSBI clearance – Active

NAICS: 541512, 518210, 541511, 519190, 511210, 541519

CAGE Code: 37PY4
