

## Enterprise-wide business intelligence

### COMPLIANCE INTEGRATION

ProLink Solutions provides the solutions and services necessary for enterprise-level intelligence integration of compliance initiatives.

Most organizations operate between three and 15 compliance silos. They struggle with multiple compliance requirements approaching compliance in individual ways. This creates several issues - 1) the lack of transparency for executive management to organizational risk mitigation efforts, and 2) inefficiencies in staffing and costly individual software solutions.

Additionally, each business unit bears the financial responsibility to build and maintain internal controls and maintain documentation.

The traditional approach to governance, risk, and compliance is usually to fix it quickly with increased staffing and a host of one-time processes.

Imagine, instead an integrated enterprise solution in which your organization has moved from a tactical "one-off" compliance approach to a holistic and highly strategic technology framework.

ProLink Solution's patent-pending framework provides you with a technology solution. This framework delivers information which flows up, down and across the organization. And, the right people have access to the right information at the right time in alignment with all compliance initiatives.

#### Recent Clients Include

- ☞ Virginia Housing Development Authority
- ☞ CBRE | Melody
- ☞ Tomkins

#### The ProLink Difference

ProLink empowers organizations to better use knowledge in their day-to-day business, optimizing data resources and providing critical decision support that:

- ☞ Improves internal collaboration
- ☞ Supports existing business processes
- ☞ Drives bottom-line performance

## ProLink Compliance Integration

The architecture for the technology solution is built on a solid platform of your integrated entity-wide processes and controls. We provide a methodology for rapid integration of existing processes.

Most organizations, at their core, perform similarly and are aligned with similar controls structures. And yet, when it comes to compliance they each individually embark on the painful path of documentation.

- ▶ **ProLink Solutions Rapid Process Integration:** Facilitated solution to integrate all your compliance and/or company processes, ProLink RPI enables you to use your existing documented processes to create one integrated portfolio view.
- ▶ **ProLink CI Solution:** Technology solution which provides a central repository for all of your governance and compliance controls. ProLink CI allows you to manage change across all business units and remain in compliance with multiple initiatives simultaneously.

## ProLink Desktop

ProLink Desktop provides a data exchange between ProLink and your existing files, allowing easy data transfer between all files and data repositories.

ProLink Desktop includes:

- ▶ **Microsoft Office Integration:** Integrates pre-existing or customized Microsoft Office Word and Excel documents and spreadsheets by creating a link between their fields and the web-based ProLink systems.
- ▶ **Document Management Tool:** Provides comprehensive bulk/batch file upload capabilities for multiple types of files.
- ▶ **System Integration:** Integrate financial applications, GL systems, compliance documentation software to transfer data and monitor changes to controls.

## Microsoft Integration

In order to best serve our clients, we strive to offer seamless integration into the applications that they already use. Today ProLink fully supports Microsoft Word® and Excel® files, with further development efforts around SharePoint® and Microsoft Dynamics™ CRM.

Our company has been a Microsoft Certified Partner since 2003. We have continually passed the ongoing partner requirements from Microsoft and have demonstrated robust, efficient and scalable implementations of Microsoft technologies.
